iServer   **Orbus**Software

iServer for Federal Organizations

iServer is a leading software platform that is used by hundreds of organizations around the world to implement their business and IT transformation plans. iServer comes complete with integrated support for a wide range of standards and reference architectures that are crucial in enabling federal bodies to carry out their transformational changes successfully. Whether your enterprise is seeking digitalization, improved cybersecurity practices, or better integration with another agency, iServer helps you achieve organizational goals quickly and while maintaining compliance with federal guidelines.

Benefits for Federal Organizations

Safeguarded Enterprise Content

Centralized repository acting as single source of truth

Rapid Time to Value

No need to retrain with iServer's familiar Microsoft Visio environment

Business-Friendly Visuals

Demonstrate due diligence with first class dashboards, diagrams and roadmaps

Enterprise-wide Communication

Keep stakeholders up to date with important developments
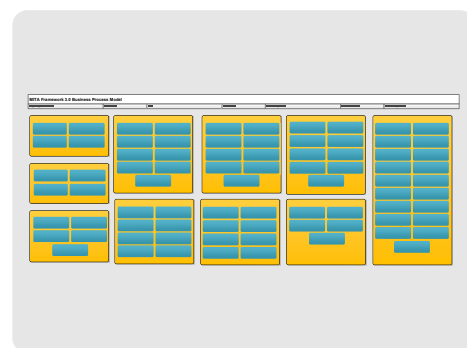

Industry Frameworks & Standards

In order to get your practice up and running as soon as possible, customers can implement iServer with a pre-configured repository and meta-model of your choice, from FEAF to FSAM, DoDAF to NIST and more. Non-federal standards such as TOGAF 9 and COBIT 5 can also be used in conjunction with preferred federal standards. This way, users are certain to start from a solid base and then have an easier time working their way towards the desired To Be state.

Analyst Insights

In Gartner's 2020 Voice of the Customer report, Orbus are the only vendor in the Customer's Choice Zone for EA tools, which is based on number of reviews and overall score to provide a balanced end-user view of the market. This position was awarded based on over 200 reviews on the customer experience of implementing and operating iServer.

In this latest evaluation, Orbus Software was once again cited as a Leader in Enterprise Architecture Management Suites. The iServer Business and IT Transformation Suite was the focus of the assessment, which included a methodology and rating system of 35 criteria around vendors' current offerings and their overarching strategy.
